

RAIN STOPPING PLAY?

SOLUTION

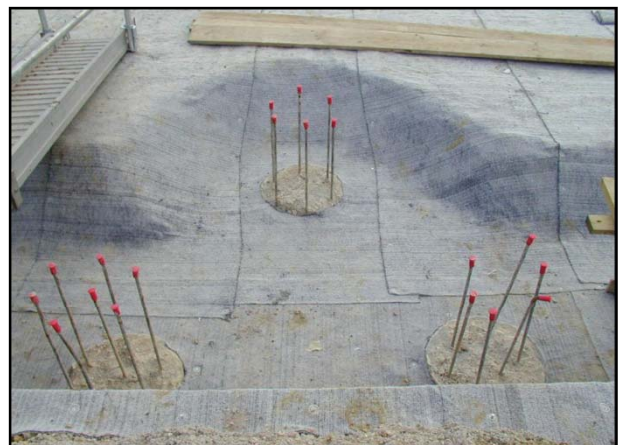

Poor Weather / Ground Conditions

Tough & Durable, Self-Healing

Ease of Installation

Simplifies Complicated Detailing

YOU'LL APPRECIATE IT'S SIMPLICITY AND MINIMAL PREPARATION
NO PRIMERS • NO ADHESIVES / TAPES • NO PROTECTION BOARDS

contact your nearest depot for more details & pricing.

FEATURES & BENEFITS

- **All Weather Application** Voltex does not require the use of any tapes or adhesives, therefore can be installed in **all** weathers and very wet conditions, including sites with water problems
- **Easy & Quick to install** Voltex can be nailed in place and then concrete poured against it. Can be applied direct to concrete piles, steel piles and cut soil; pre or post applied to walls
- **Very Rugged & Durable** Voltex does not require protection boards and backfilling can be done many months after installation
- **Self-Healing** Small areas of damage, caused by site traffic etc, will self-seal
- **Environmentally Friendly** CETCO is wholly committed to reducing the environmental impact of its manufacturing, products (probably the 'greenest' waterproofing products in the world)

ANCILLARIES

- **RX101 Waterstop** Bentonite, hydrophilic waterstop for construction joints and pipe penetrations
- **Voltex Granules** Granular sodium bentonite for filling cavities and voids
- **Bentoseal** Fillet material for corners, angles and detailing, available in both cartridge and trowel format
- **Swelltite** Composite, bentonite waterproofing system for brick and block wall applications
- **Volseal 100** Bituminous, polymer-modified liquid membrane
- **Volseal 200** Cementitious waterproofing by crystallisation
- **Volseal 250** Flexible, cementitious waterproof coating for internal or external applications
- **Voldrain** Sub-surface, drainage geocomposite to reduce hydrostatic pressure
- **Voltex T.B.F.** Single pack, high-strength, non-shrink, cementitious tie bolt filler
